How do I address **open science** in my proposal?

Open science (OS) takes a central place in Horizon Europe and open science practices are considered in the evaluation of Horizon Europe proposals. If not applicable to the proposal, justifications should be provided so that, if evaluators agree, open science will not be taken into consideration in the evaluation.

Part A. Application form

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements of consortium members relevant to the call content.

- Publications expected to be open access
- Datasets expected to be FAIR and open*

* "As open as possible, as closed as necessary"

Part B. Project proposal - Technical description

1 Excellence

1.1 Objectives and ambition

1.2 Methodology

Open Science [max. 1 page]

Describe how OS practices are integrated into the methodology and adapted to your work to support project objectives. Include mandatory practices and, where relevant, recommended ones. If none apply, provide justification.

Mandatory OS practices

- Open access to scientific publications
- Open* access to research data
- Information/documentation about research outputs needed for research validation and data reuse
- Management of research data in line with FAIR principles

Recommended OS practices

- Early and open sharing of research
- Preregistration, open peer-review
- Citizen science, society engagement
- Research output management (beyond data)
- Reproducible outputs

2 Impact

2.1 Project's pathways towards impact

1.2 Measures to maximize impact. Dissemination, exploitation & communication

Tips

- Refer to relevant Open Science practices described in the Methodology section (i.e. open access to research outputs and early and open sharing of research)
- Make sure proposed practices are compatible with your dissemination and exploitation plan (e.g. protection of intellectual property) and consortium agreements

2.2 Summary

3 Quality and efficiency of the implementation

3.1 Work plan and resources

Tips

- Give visibility to RDM with distinct tasks or work packages
- Include the full Data Management Plan (DMP) and updates as deliverables
- Include other relevant RDM activities and budget them

3.2 Capacity of participants & consortium as a whole

Tips

- Describe consortium partners' capacities in open science
- Refer to UGent's efforts to promote & support Open Science
